DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 11-15, 19-21 & 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Enomoto et al. (US Patent No. 5,291,941). Enomoto discloses an air conditioner with a bypass line with a flow control device and comprising: an air conditioner (6), air cooled condenser (11), a first expansion valve (13), a heat exchanger forced air evaporator (14), an accumulator (15), a cooling bypass conduit (20) made inherently of copper and thereby situated between the condenser & evaporator at one point and the other end connected between the compressor & condenser, fans (28,35), a switching device (101) used for inputting an "ON-OFF" signal of heat or cooling to a control unit (100) and a thermister (103) detects the temperature of air downstream of the heat exchanger (14).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Enomoto in view of Rafalovich et al (5,755,104). Enomoto discloses the claimed invention as stated above but lacks a solenoid valve and metering valve for flow control. Rafalovich teaches a heating & cooling bypass system consisting of a flow controls such as solenoid & metering valves. Therefore it is deemed by examiner, that it would have been obvious to one having ordinary skill in the art at the time the invention was made to integrate solenoid & metering valves as taught by Rafalovich within the disclosed bypass cooling system of Enomoto for the mere purpose of better controlling refrigerant within cooling system and yielding a more efficient operating of compressor and heat exchangers.

Allowable Subject Matter

Claims 1-10 are allowed over the prior art of record.

Claims 22-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
